

# HURRICANE PROTECTION

SERVING BERMUDA & THE CARIBBEAN FOR 40 YEARS

ISLAND SHIPPING FOR SHUTTERS

## SHUTTERS PROTECT YOUR HOME

There are so many great things about living in Bermuda and the Caribbean. Part of this wonderful lifestyle, is also inevitable – hurricane season. Global Sales has several shutter and panel options to protect your home from storms.

Our shutters and panels are made of high-quality products and are proven to perform in the islands. We have experts to explain your shutter options and to help with measuring.

The Bahama Shutters (shown above) and Colonial Shutters (shown right) are the two most popular options. They both combine decorative and functional benefits. Bahama and Colonial shutters are easy to open and close when storms approach.

## Rollup Shutters

- ◆ One touch operation motorized option
- ◆ Manual hand crank operation standard
- ◆ No lifting or tools required and no panels to store
- ◆ Retract out of the way when not in use.

## Accordion Shutters

- ◆ Very strong wind and impact protection
- ◆ No lifting or tools required, no panels to store
- ◆ Second floor openings can be closed from inside
- ◆ Shutters retract to the side when not in use
- ◆ Viewports available. Good option for doors.

## Fabric Screen Panels

- ◆ Nylon hybrid fabric with UV resistant resin coating
- ◆ Custom cut to your length or available by the roll
- ◆ Applications for concrete, block or wood
- ◆ Comes with storage bags for easy access.

## Storm Panels

- ◆ Custom cut to your length and keyhole punched
- ◆ Special hem or knurled edges for safety
- ◆ Half panels available for most panel types
- ◆ Variety of headers, track and angle systems.

## CHOOSE YOUR COLOR

### Bahama & Colonial Shutters

Choose from the Standard or Premium Colors listed below.

Please request paint chips for actual colors.

#### Standard Colors:

#### Premium Colors (additional cost):

## CHOOSE YOUR COLOR

### Rollup Shutters

Available in White, Ivory, Bronze or Beige.

### Accordion Shutters

Available in White, Ivory, Bronze or Beige.

### Fabric Screen Panels

Available in White or Tan.

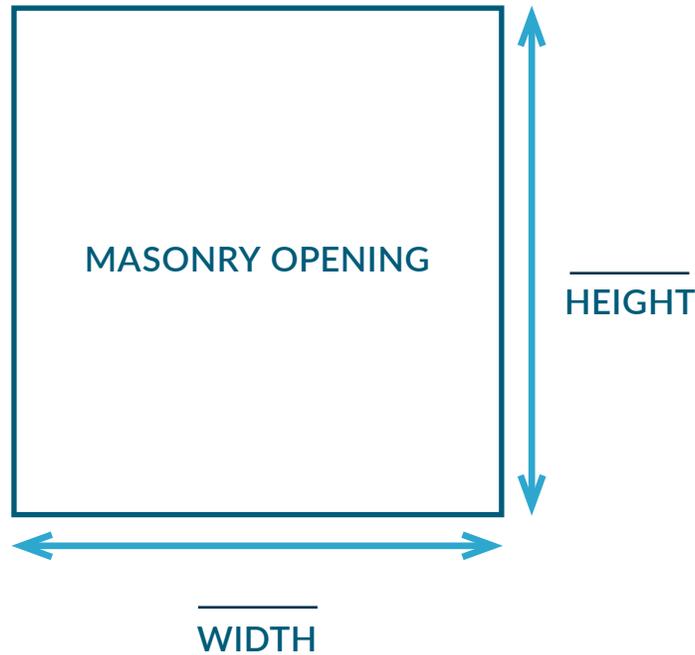

### Storm Panels

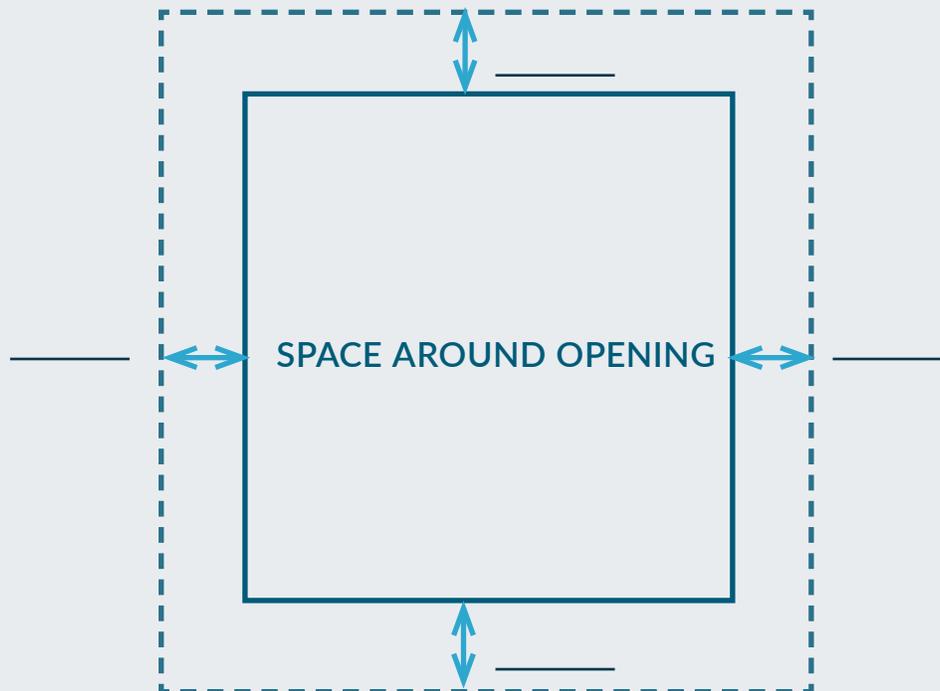

Available in Aluminum, Galvanized Steel or Clear.

## STANDARD MASONRY MEASUREMENTS

The measuring process for hurricane shutters is similar regardless of which type of shutters you would like. Measure from the outside, along the opening in the wall. Measure the width first and then the height.

The other relevant consideration is the space available around the outside opening. Measure the distance to the closest obstruction. Most windows and doors have a threshold or sill at the bottom and the space available will be zero or close to zero.

**Sending photos of your windows and doors help ensure proper measurements.**

## IN BERMUDA ONLY: SUB-FRAME MEASUREMENTS NEEDED FOR BAHAMA AND COLONIAL STYLES

The measuring process for Bahama and Colonial Shutters when using windows installed in sub-frames (as traditionally done in Bermuda) varies slightly from a standard masonry measure. Other shutter types (Rolling, Accordion, Fabric and Storm Panels) are measured using the “Standard Masonry Measurements” on pages 6 and 7.

When measuring with sub-frames, we are looking for the inside frame dimension. Measuring the width first and then height. The other consideration is the width of the sub-frame. It should be the same on all four sides (but please check to confirm as this is not the case 100% of the time).

**Sending photos of your windows and doors help ensure proper measurements.**
